BY JEFFREY WANDEL

Check out these 9 outrageous facts.

The Earth weighs about 6.6 billion trillion (that's 6,600,000,000,000,000,000 tons).

DONUTS DID NOT HAVE HOLES UNTIL THE 1800s.

6009 is the next year that will look the same right side up and upside down; the last one was **1961**.

MUCH OF THE DUST IN YOUR HOME COMES FROM YOUR FAMILY'S DEAD SKIN CELLS.

THE POUND SYMBOL ON PHONES IS ALSO CALLED

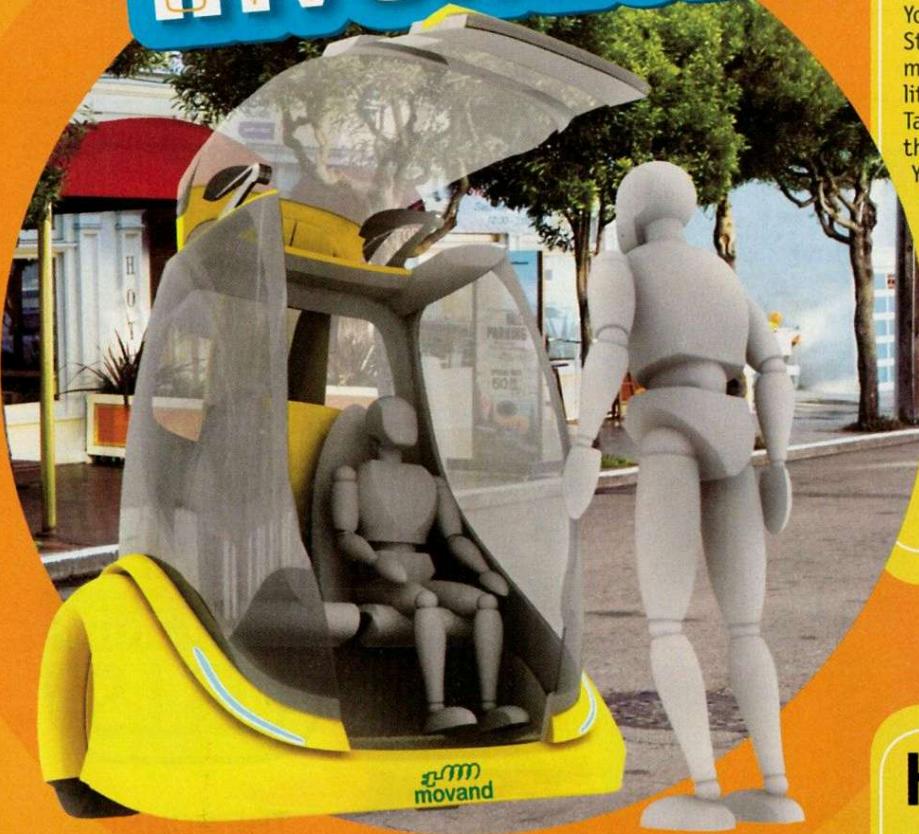

AN OCTOTHORPE.

COOL inventions

BY CATHY LU

HOLLYWOOD AT HOME

Can you act, faking a cowardly cry like the lion in *The Wizard of Oz*? Or mimic Veruca Salt's tantrum from *Willy Wonka and the Chocolate Factory*? Here's your lucky break. Yoostar combines computer technology and cool Hollywood tricks to insert your face and body into scenes from movies. Install the software and webcam on your computer. Pick

a scene and perform to the computer screen, which gives you your lines and displays an outline (where the original character used to be) that shows how to position your body. Then the software will put you into the scene. Oscar night, here you come.

ROBO-TAXI

You just checked out the view from the Empire State Building, and now it's time to head to a museum. You call for a taxi. Within minutes, a little yellow cab without a driver, called an Eco Taxi, comes rolling along. You press a button and the glass door in front slides up and over the roof. You step inside, sit down, and punch in your destination on the touch screen. Off you go, with no one at the wheel! Currently just a concept, the robotic taxi uses sensors and satellite technology to safely reach its destination. The environmentally friendly taxi runs on batteries that last about eight hours. When the batteries run low, the car automatically heads to a recharging platform to "fuel" up. On your way, you can darken the front window so you can watch a video during the ride. In this taxi, there's no distracted driver to worry about.

READY TO ROLL

HUMMINGBIRDS UP CLOSE

You're sitting in your yard when all of a sudden, a hummingbird flies within inches of your face. You can look into its eyes and hear its wings flapping.

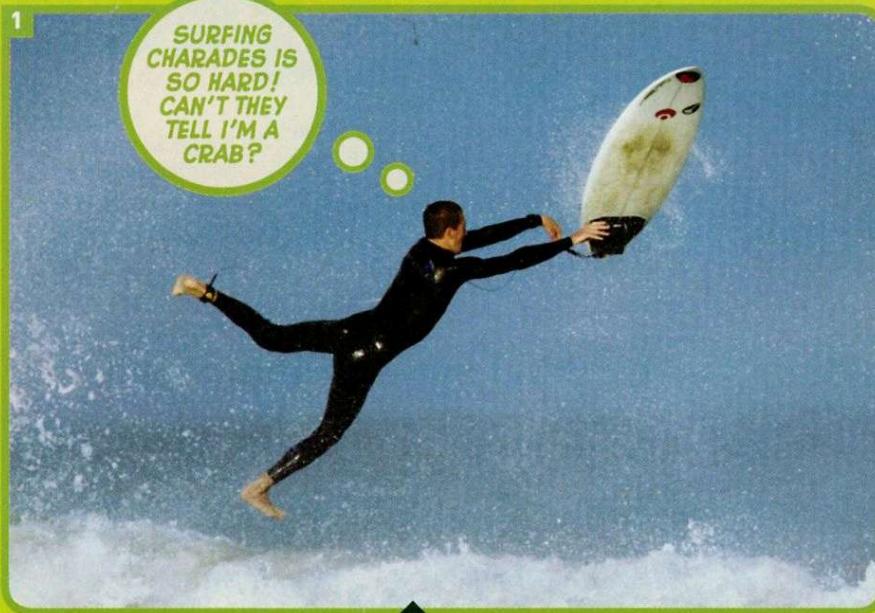

It flitters above your nose and starts to drink. In the Wearable Hummingbird Feeder, you're a human bird feeder. Pictures of red flowers attract these colorful little birds to you. But what keeps them hanging around is sugar water, which helps give them the energy they need to flap their wings up to 80 times a second. The mask has a clear feeding tube that runs along the top of your head to the space between your eyes. Hold still!

VIDEO game CENTRAL

BY MARK MACDONALD

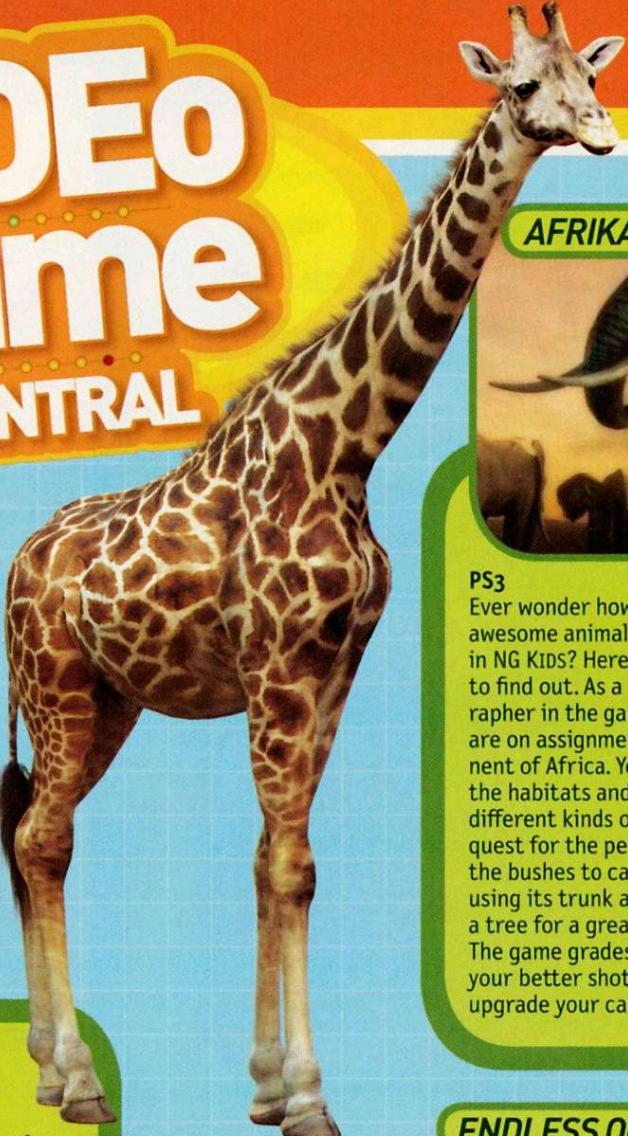

IT "PLAYS" TO LEARN

You've heard it before: Learning can be fun. These three video games actually prove it. If anyone asks what you're doing while playing, you can honestly answer, "I'm studying!"

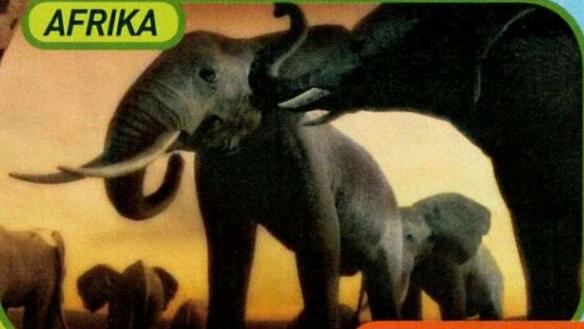

COOKING MAMA 3: SHOP & CHOP

Nintendo DS

Learn all about cooking wherever you want with your own portable personal chef: *Cooking Mama 3*. This game mixes in fun mini-games at every step, from shopping for groceries to presenting the finished meal. Slash lines on the DS's touch screen to chop up your veggies, make circles to mix up your ingredients, and blow into the microphone to cool down your dishes if they get too hot. The recipes start simple but soon get as complex as mushroom quiche and pumpkin gnocchi.

AFRIKA

PS3

Ever wonder how they get all the awesome animal photos you see in NG KIDS? Here's your chance to find out. As a nature photographer in the game *Afrika*, you are on assignment on the continent of Africa. You'll learn about the habitats and behaviors of different kinds of wildlife in your quest for the perfect shot. Hide in the bushes to capture an elephant using its trunk as a shower, or climb a tree for a great angle on a feeding giraffe. The game grades your pictures and rewards your better shots with money you can use to upgrade your camera equipment.

>>TIP #1: Find a bottle hidden in the water near Polepole Falls at Choroa Gorge to earn a trophy.

>>TIP #2: When you're sneaking in for a close-up, try hiding in the shade. Animals will be less likely to notice you.

ENDLESS OCEAN: BLUE WORLD

Wii

Ready to get your feet wet? Dive into this undersea adventure and learn all about hundreds of aquatic species, from tiny seahorses to giant squid, as you explore oceans and rivers around the world. If you spot any aggressive sharks or sick sea turtles, use your special Pulsar tool to repel or heal them. You might also discover undersea treasures hidden in shipwrecks and ancient ruins. Sell what you salvage to earn money and buy coral to attract new kinds of fish to your own private reef.

>>TIP #1: If you want to get around quickly, try grabbing onto a dolphin buddy for a quick burst of speed.

>>TIP #2: Keep getting attacked by piranhas and sharks? Invite a friend along to watch your back via *Blue World's* co-op multiplayer mode. Explore the oceans and rivers together.

ASTONISHING
STORIES FROM
THE FILES OF

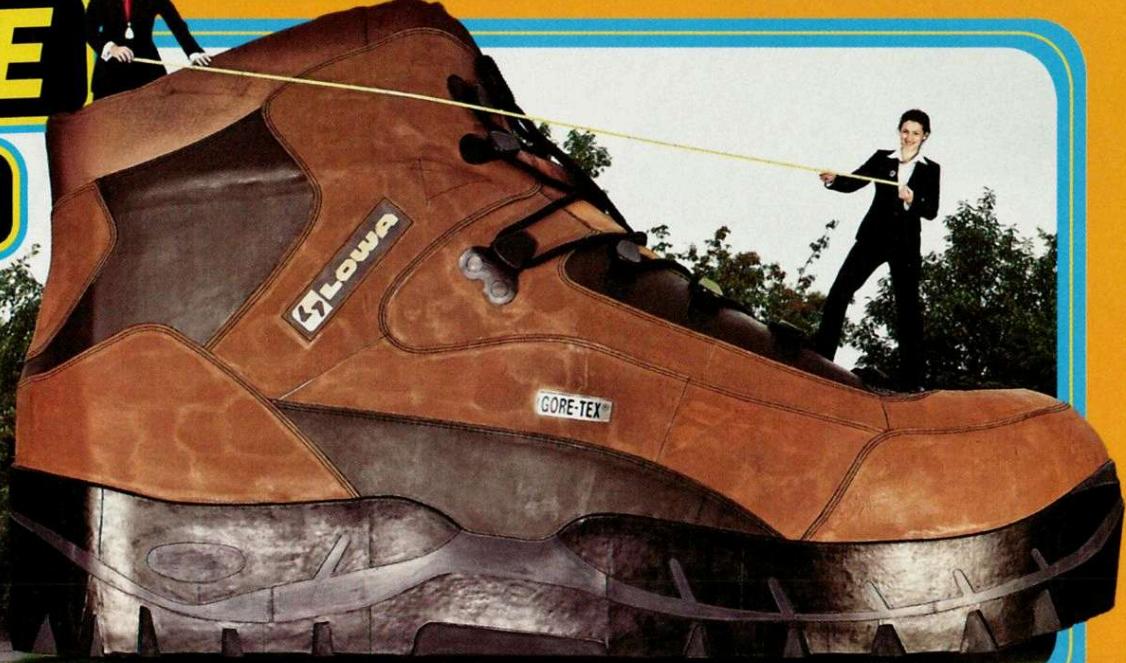

Guinness World Records

BY MADALINE DONNELLY

Go online for more information about Guinness
World Records! kids.nationalgeographic.com/Videos

HUGE SHOE

The old lady who lived in a shoe would've been set if she had moved into this boot. The largest hiking boot stands at 13 feet 9 inches tall, almost twice the height of NBA star Shaquille O'Neal. Built by a German shoe company, the boot weighs about as much as a beluga whale and has shoelaces that are 115 feet long. Wonder how much time it took to lace it up?

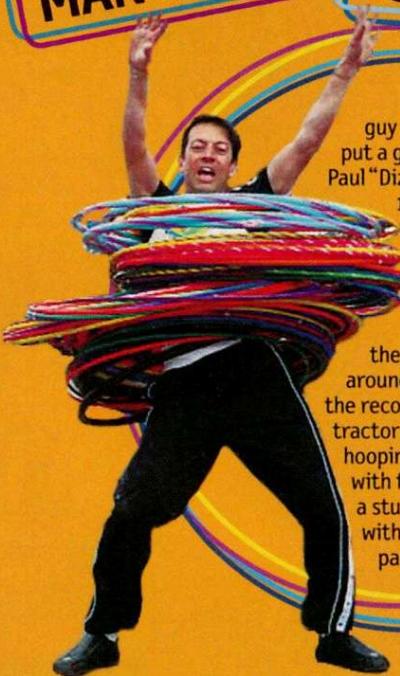

SOLID-GOLD BATHROOM

Talk about the Midas flush, er, touch. This gold bathroom was worth \$3.5 million when it was built, the most expensive on record. The toilet, sink, wall tiles, floor, doors, and even trash cans were all made of 24-carat gold. Thousands of diamonds, rubies, sapphires, and pearls studded the ceiling. Visitors to the bathroom, which was in a jewelry store in Hong Kong, China, even wore plastic covers on their shoes to protect the floor. Today the bathroom would be worth about \$10 million. The toilet sure is one real golden throne!

MAN SPINS

136 HOOPS

This guy knows how to put a good spin on things. Paul "Dizzy Hips" Blair can spin 136 hula hoops at the same time, the most on record. After picking up all the hoops at once, he can spin them 7½ times before they fall. That's like spinning the weight of a 4-year-old kid around your waist! To train for the record, Blair spun a 100-pound tractor tire. He also teaches hula hooping and jump roping, often with funny results. Once when a student was practicing with a jump rope, his pants fell down!

The Truth
Behind
the New
Movie

CATS & DOGS

THE REVENGE OF KITTY GALORE

BY SARAH WASSNER FLYNN

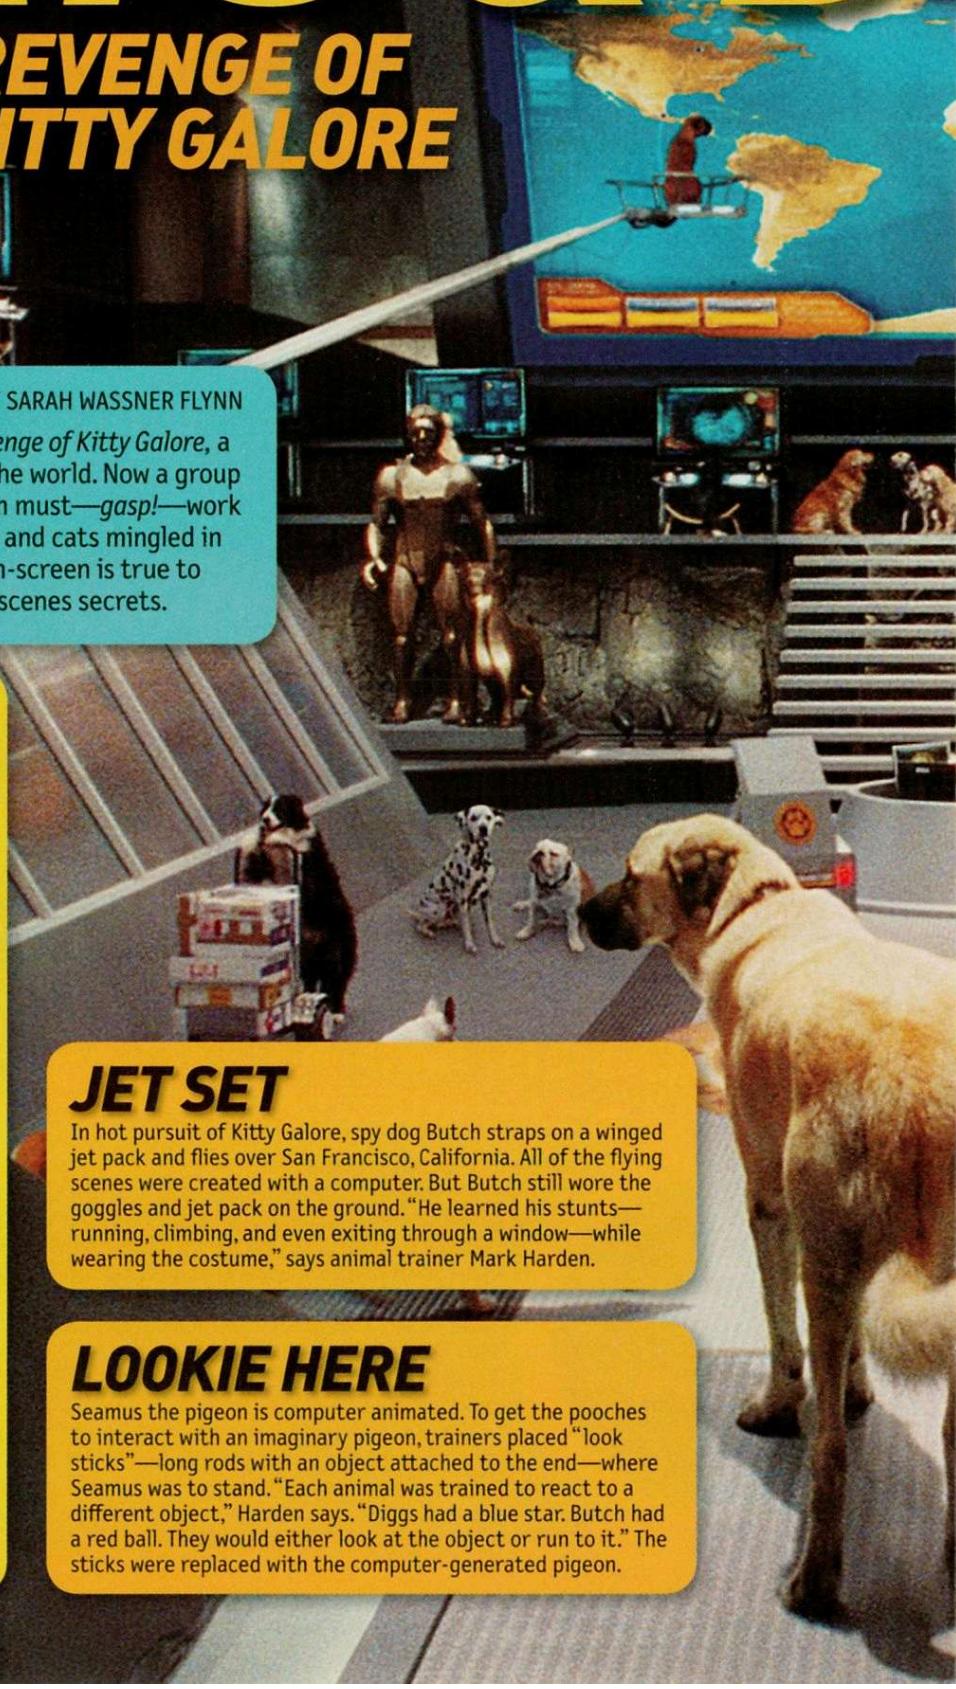

In the new movie *Cats & Dogs: The Revenge of Kitty Galore*, a feared feline attempts to take over the world. Now a group of cats and dogs dubbed the Spy Team must—gasp!—work together to stop the evil kitty. Real dogs and cats mingled in the movie, but not everything you see on-screen is true to life. NG KIDS sniffs out some behind-the-scenes secrets.

THE REAL KITTY GALORE

FAKE SMILE

Kitty Galore gains access to some top-secret files by disguising herself as a cute cocker spaniel puppy. But she soon reveals her dark side to an unsuspecting guard dog by unzipping her costume and flashing an evil cat smile. So can a cat really crack such a ghoulish grin? Not quite. In this scene, Kitty Galore—with that sinister smile—was created on a computer. (The real Kitty is a sphynx cat.) Other characters had life-size, high-tech puppet doubles. Offscreen, two puppeteers used Wii-like controls to manipulate movements such as difficult stunts and facial expressions.

JET SET

In hot pursuit of Kitty Galore, spy dog Butch straps on a winged jet pack and flies over San Francisco, California. All of the flying scenes were created with a computer. But Butch still wore the goggles and jet pack on the ground. "He learned his stunts—running, climbing, and even exiting through a window—while wearing the costume," says animal trainer Mark Harden.

LOOKIE HERE

Seamus the pigeon is computer animated. To get the pooches to interact with an imaginary pigeon, trainers placed "look sticks"—long rods with an object attached to the end—where Seamus was to stand. "Each animal was trained to react to a different object," Harden says. "Diggs had a blue star. Butch had a red ball. They would either look at the object or run to it." The sticks were replaced with the computer-generated pigeon.

OGS:

Sharks propel themselves through the water using their tails.

There are about 400 species of sharks.

A dramatic close-up photograph of a great white shark's head. The shark's mouth is wide open, revealing a row of sharp, white, triangular teeth and the dark, fleshy interior of its oral cavity. Red, oxygenated blood is visible on the gills and around the teeth. The shark's skin is a mottled grey and white. The background is the dark, textured surface of the ocean water.

NATIONAL
GEOGRAPHIC

Sharks can smell a single drop of blood up to a third of a mile away.

Great white sharks can grow to be 21 feet long.

THE 20 CUTEST ANIMALS OF ALL TIME

BY B.F. SUMMERS

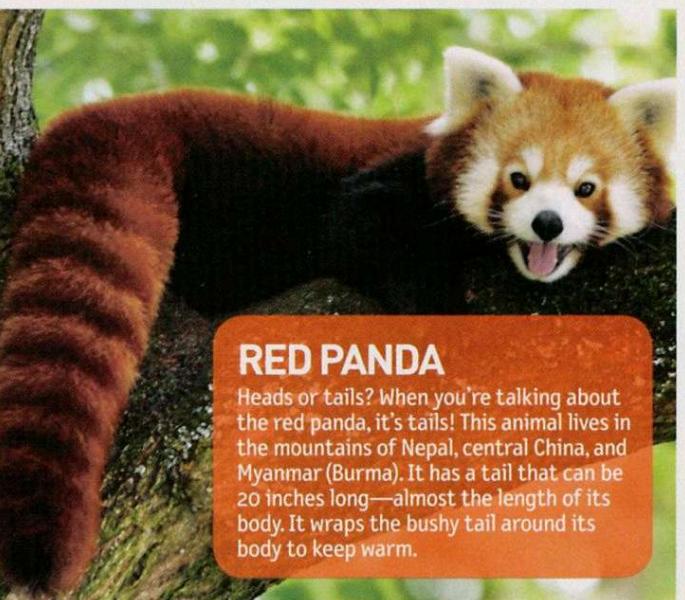

EMPEROR PENGUINS

What is this emperor penguin squawking about? Perhaps its supersmart strategy to stay warm. To survive winter storms in the frozen Antarctic, hundreds of male emperor penguins huddle together for warmth. Every so often they rotate, so that each penguin gets a turn in the middle, where it's the warmest.

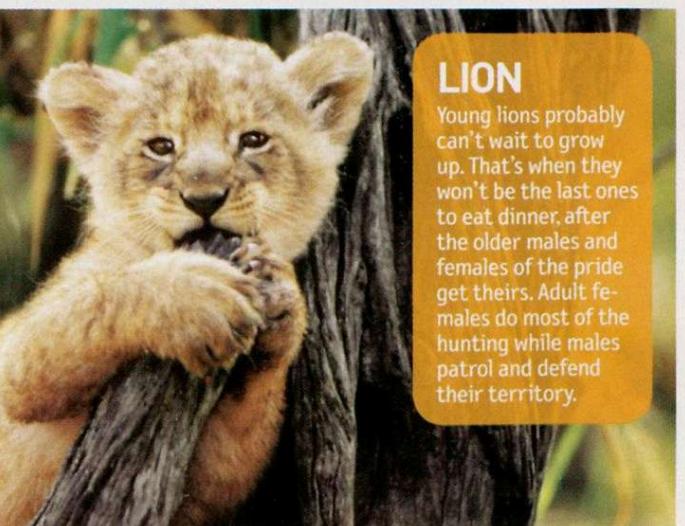

RED-EYED TREE FROG

These red eyes aren't just for show. If a hungry snake approaches a sleeping frog, it can flash the bright red color and hopefully startle the predator. Then the frog, which lives in rain forests of southern Mexico and Central and South America, can hop away.

RED PANDA

Heads or tails? When you're talking about the red panda, it's tails! This animal lives in the mountains of Nepal, central China, and Myanmar (Burma). It has a tail that can be 20 inches long—almost the length of its body. It wraps the bushy tail around its body to keep warm.

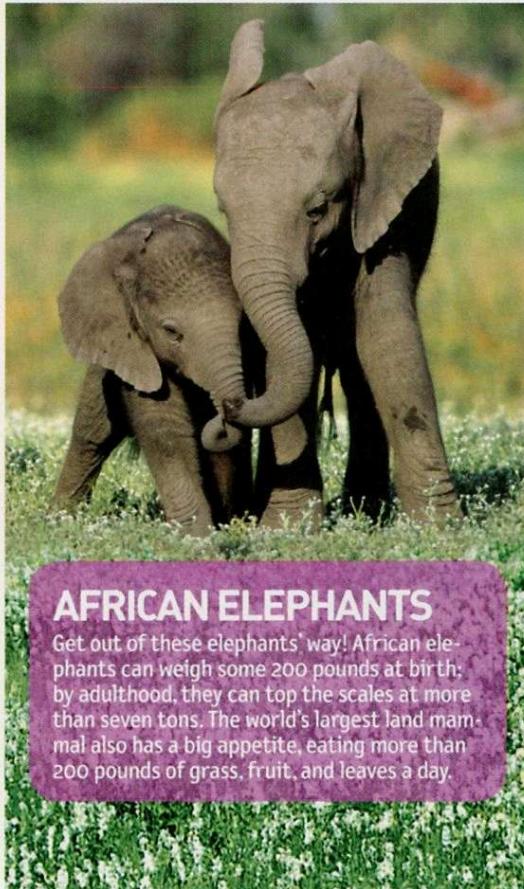

LION

Young lions probably can't wait to grow up. That's when they won't be the last ones to eat dinner, after the older males and females of the pride get theirs. Adult females do most of the hunting while males patrol and defend their territory.

CHIMPANZEE

This little ape might be having fun, but there are brains behind its party attitude. Chimps, which live in the tropical forests of Africa, are extremely intelligent. They use sticks as tools to "fish" for bugs in logs, and crush leaves in their mouths to soak up drinking water like sponges.

AFRICAN ELEPHANTS

Get out of these elephants' way! African elephants can weigh some 200 pounds at birth; by adulthood, they can top the scales at more than seven tons. The world's largest land mammal also has a big appetite, eating more than 200 pounds of grass, fruit, and leaves a day.

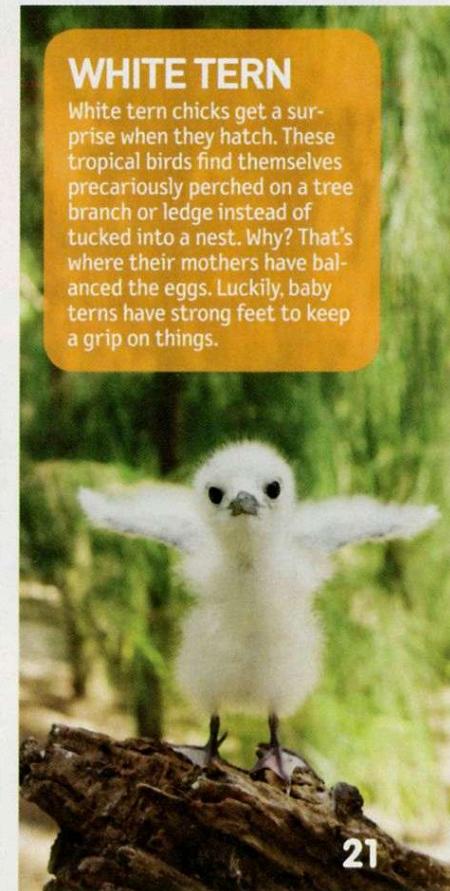

BENGAL TIGER

This tiger cub isn't likely to get lost. Like all tigers, it has white markings on the backs of its ears that the mother may use to keep her cub in sight. Adult Bengal tigers are sneaky hunters. Their stripes hide them in tall grass so they can sneak up on prey where they live in India.

WHITE TERN

White tern chicks get a surprise when they hatch. These tropical birds find themselves precariously perched on a tree branch or ledge instead of tucked into a nest. Why? That's where their mothers have balanced the eggs. Luckily, baby terns have strong feet to keep a grip on things.

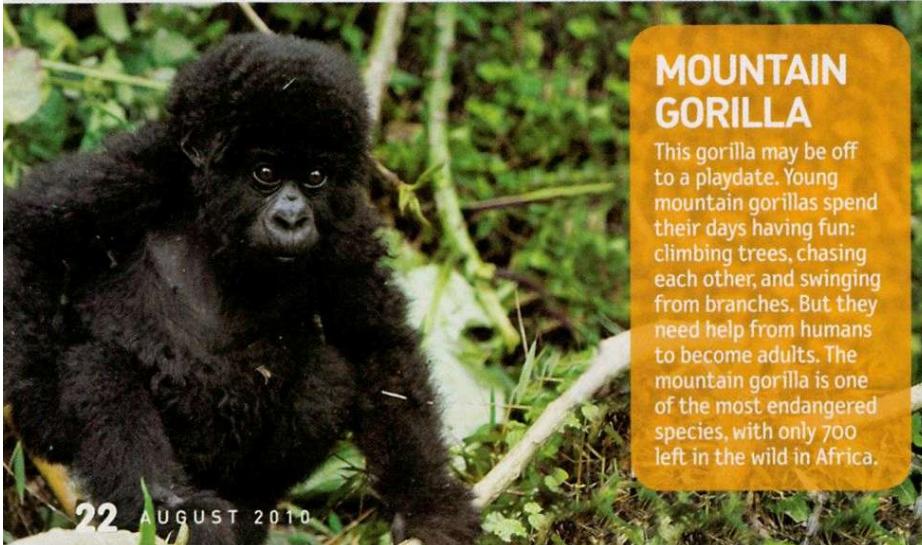

LEOPARD

By the time a cub is an adult, it will be hanging out in trees. They rest in trees during the day, sometimes hunt from them at night, and even drag up prey to eat. A leopard's spots help hide the big cat, both in trees and on the ground in Africa and Asia, where they live.

POLAR BEAR

This cute polar bear will probably grow up to be a fierce predator built for surviving in the bitter cold. In winter, a polar bear's body can have up to four inches of blubber under two layers of fur to keep it warm. These carnivores of the Arctic region can pick up a seal's scent 20 miles away.

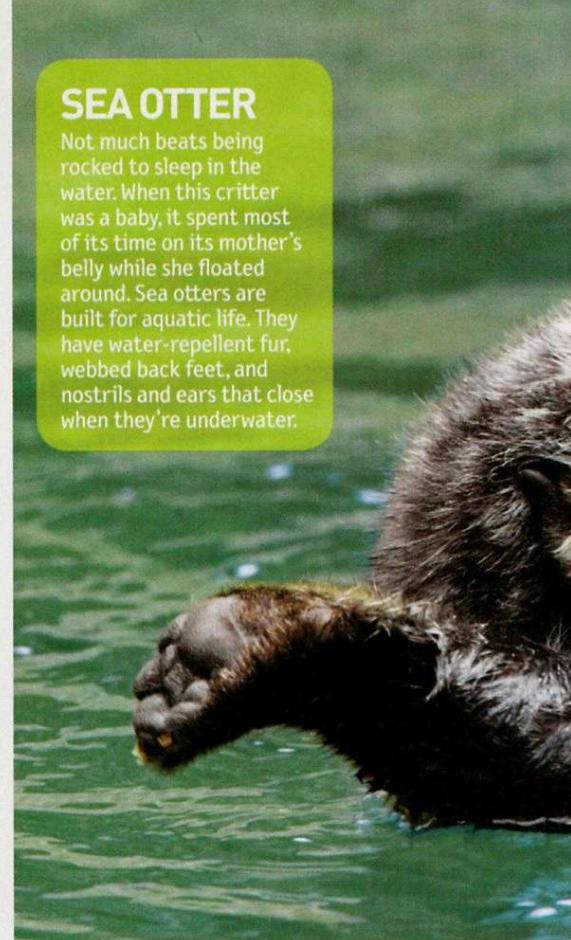

MOUNTAIN GORILLA

This gorilla may be off to a playdate. Young mountain gorillas spend their days having fun: climbing trees, chasing each other, and swinging from branches. But they need help from humans to become adults. The mountain gorilla is one of the most endangered species, with only 700 left in the wild in Africa.

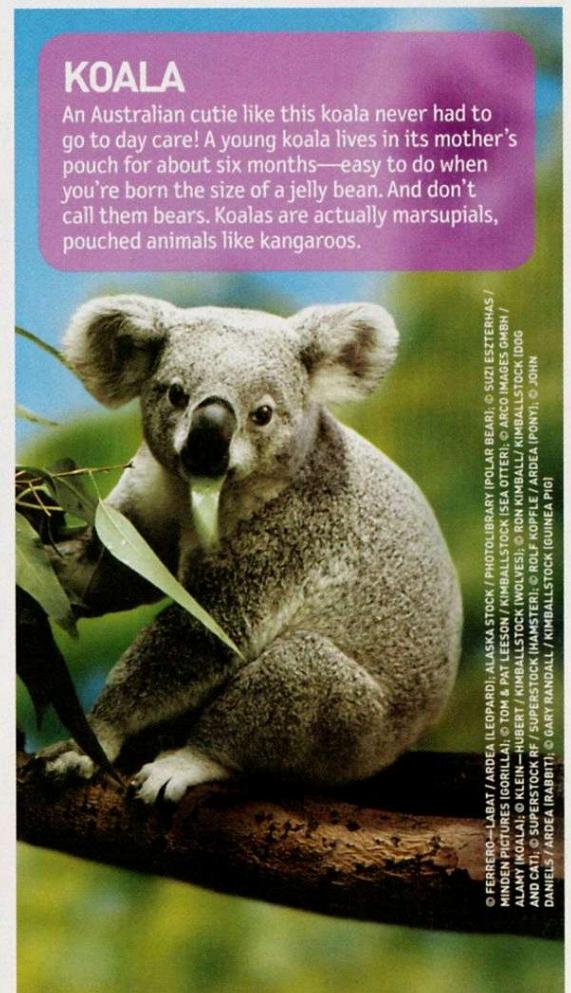

SEA OTTER

Not much beats being rocked to sleep in the water. When this critter was a baby, it spent most of its time on its mother's belly while she floated around. Sea otters are built for aquatic life. They have water-repellent fur, webbed back feet, and nostrils and ears that close when they're underwater.

KOALA

An Australian cutie like this koala never had to go to day care! A young koala lives in its mother's pouch for about six months—easy to do when you're born the size of a jelly bean. And don't call them bears. Koalas are actually marsupials, pouched animals like kangaroos.

© FERRERO-LABAT / ARDEA (LEOPARD); ALASKA STOCK / PHOTOLIBRARY (POLAR BEAR); © SUZIESTERNAS / MINDEN PLATZ (GORILLA); © TOM & PAT LEESON / KIMBALLSTOCK (SEA OTTER); © ARCO IMAGES (MARMOSET AND CAT); © KAREN HUBER / KIMBALLSTOCK (MONKEYS); © KAREN HAMBALL KIMBALLSTOCK (DOG); © ROLF KOPPEL / ARDEA (PONY); © JOHN DANIELS / ARDEA (RABBIT).

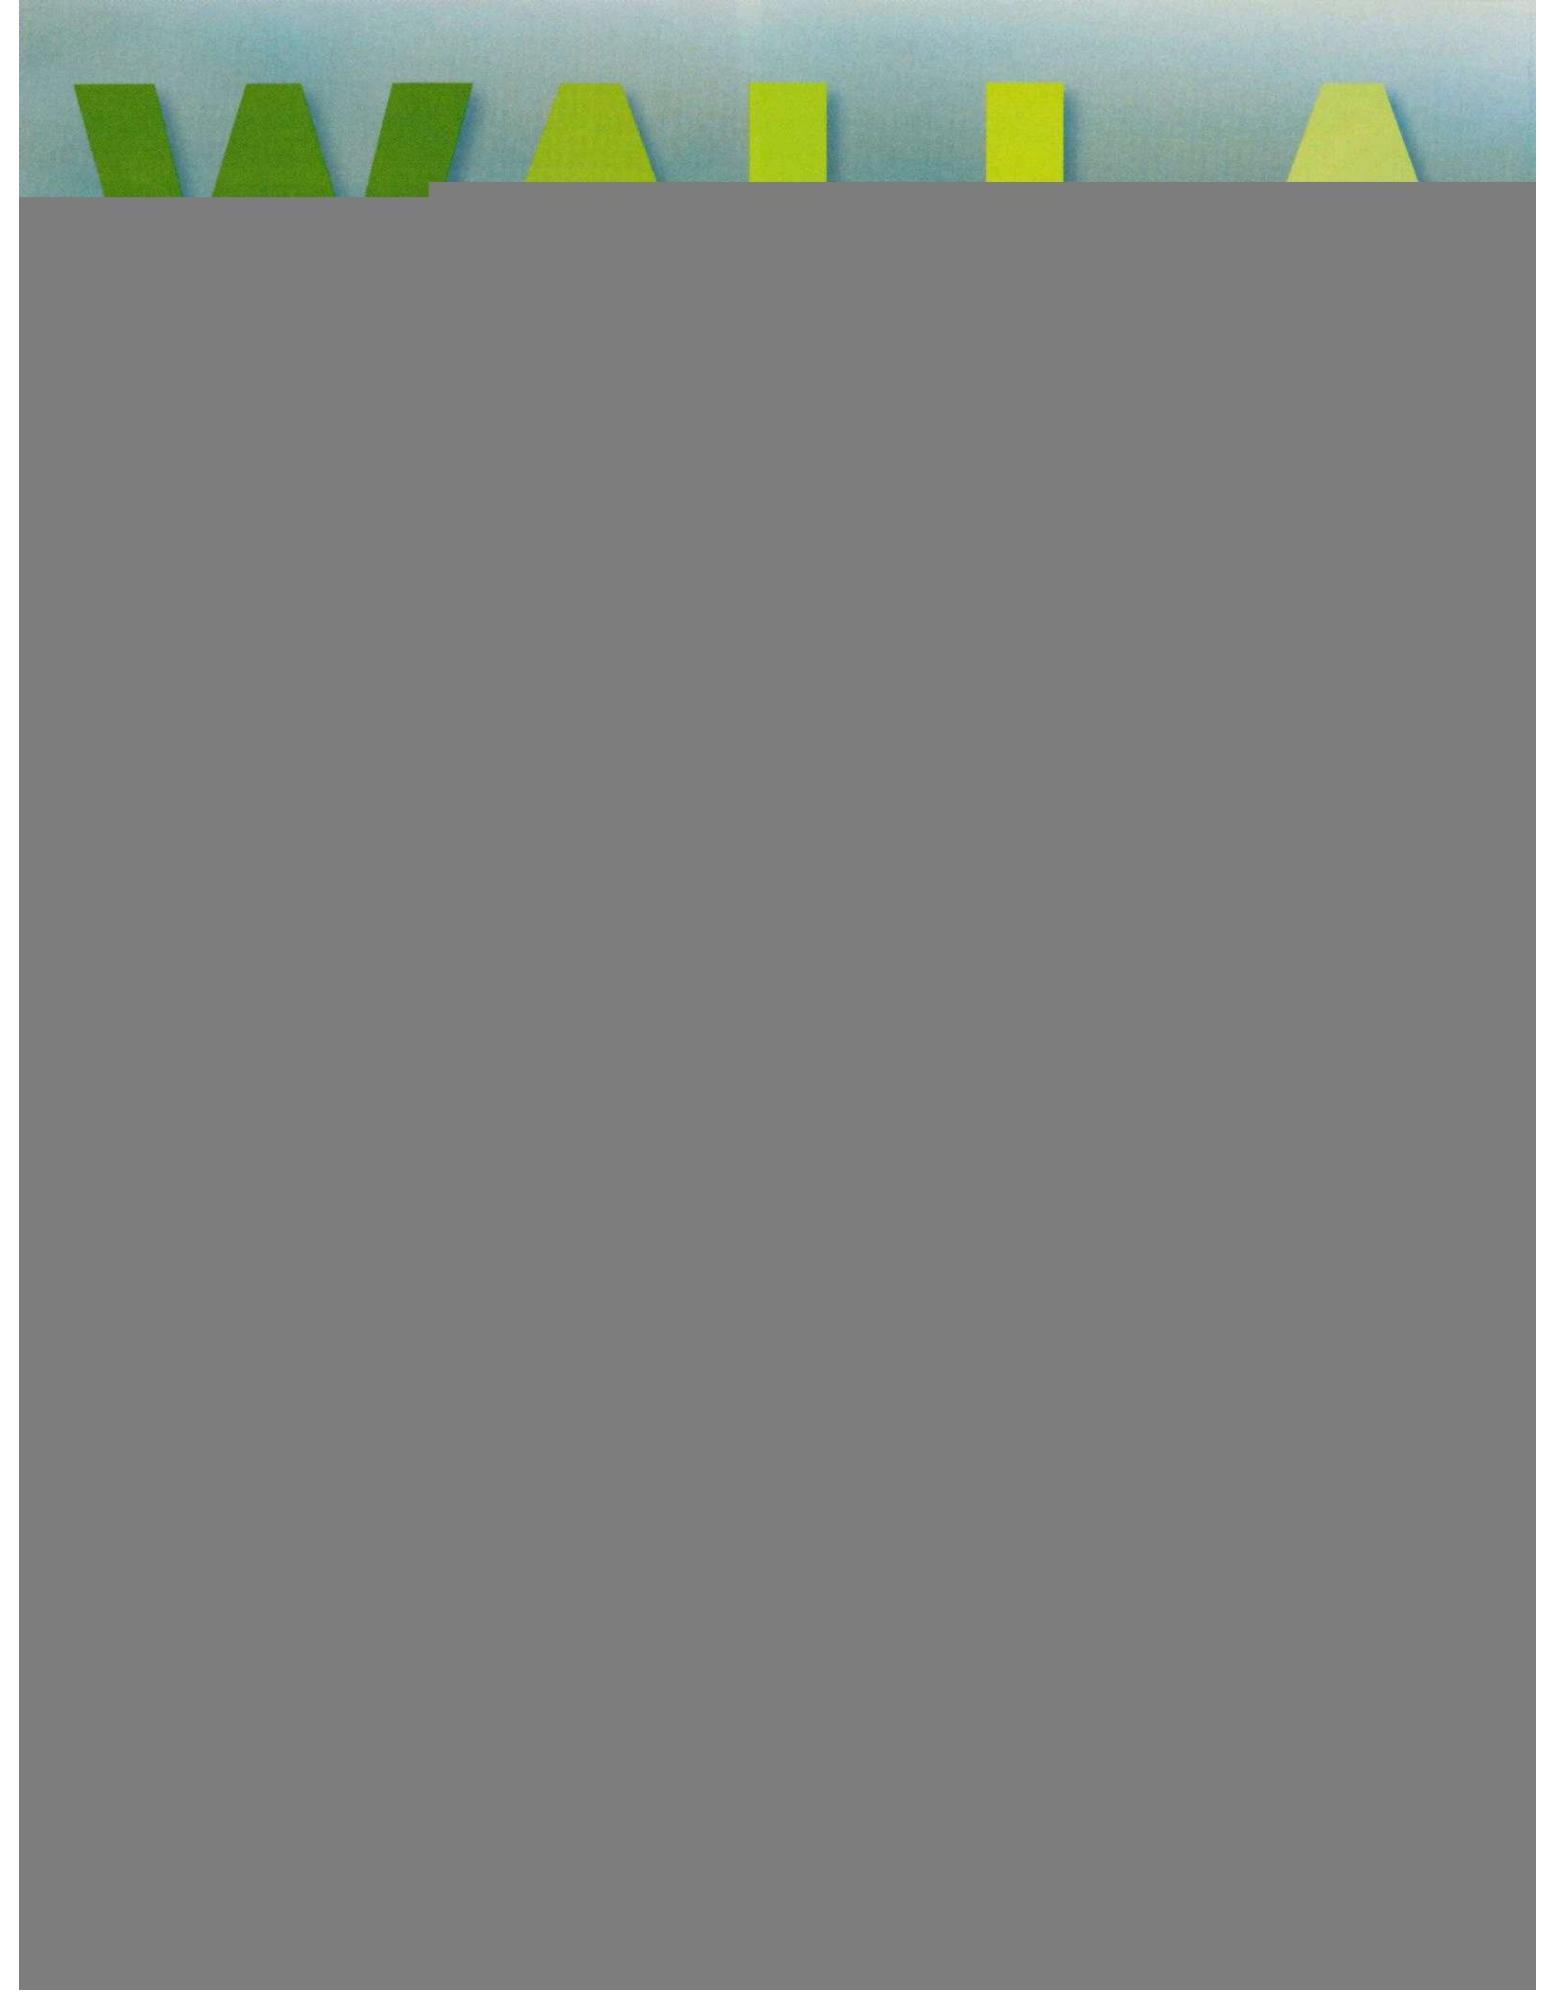

SUPERCUTE PETS!

PUPPY AND KITTEN

If you have a cute dog or kitty like these, which also appear on our cover, you're not alone. Dogs live in 39 percent of U.S. homes, and cats are in 33 percent. And folks love their pets:

FREAKY Forces in Space

BY STEPHEN ORNES

On a dark and peaceful night, the stars appear to glitter quietly in the sky. But don't be fooled: Outer space is a dramatic place. Galaxies smash together, black holes devour anything nearby (including other black holes), and stars are born in vivid clouds of gas. Forget everything you thought you knew about physical forces. In outer space, they're so extreme that they're barely recognizable: gravity powerful enough to tear apart a galaxy...radiation that could microwave a planet. Here's a telescopic view of some of the more mind-boggling cosmic events.

10

COSMIC
EVENTS
IN THE
UNIVERSE

1

GREAT GUSHING GEYSERS

On Earth geyser are spectacular natural fountains that blast liquid water into the air. But on Enceladus, one of Saturn's moons, geysers are giant and spew tiny ice particles and vapor into outer space. There they form the largest of Saturn's famous rings. For the past few years, NASA's Cassini spacecraft has been taking pictures of the moons of Saturn, including Enceladus and its wild geysers. Cassini has even flown through the icy plume.

2

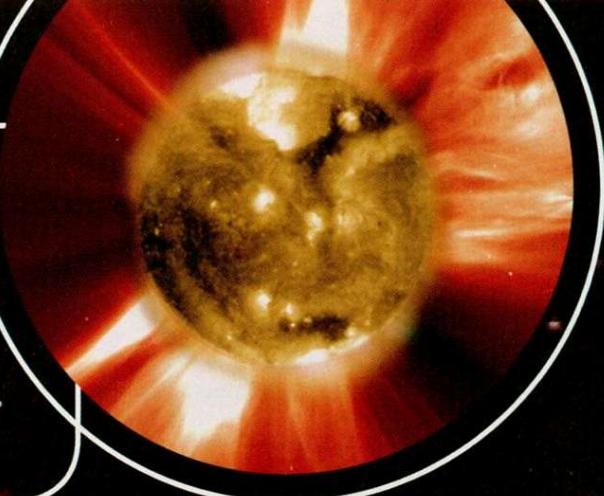

EXTREME DARKNESS

When you're near a black hole, gravity is your worst enemy. No spaceship or planet can get close to a black hole without being pulled in and ripped apart. Not even light can escape. (The illustration below shows what a black hole might look like if it could be seen.) Scientists suspect a black hole lurks at the center of most giant galaxies. And just as Earth's gravity is strong enough to keep the moon nearby, a black hole's gravity keeps hundreds of millions of stars around it. Why is a black hole so powerful? The more mass something has, the stronger its gravity. A giant black hole can have as much mass as billions of suns put together.

3

MIGHTY SOLAR BURPS

The sun seems like such a consistent, dependable old friend as it rises and sets each day. But periodically, a blob of billions of tons of plasma rises through the sun's atmosphere like a hot-air balloon until it blasts away from the sun at nearly the speed of light. Called coronal mass ejections, these are the most powerful explosions in the solar system—nearly equivalent to a billion hydrogen bombs. When the force of such a solar “burp” reaches Earth, it crashes into our planet's protective magnetic field, causing disruptive geomagnetic storms that can cripple satellites.

**4**

RAYS OF POWER

The kinds of radiation you may know—x-rays and microwaves—are nothing compared to gamma rays, the most potent radiation in the universe. Waves of gamma radiation have 40 million times as much energy as visible light. In medicine, doctors use small doses of gamma rays to treat diseases like cancer. But astronomers have found huge bursts of gamma rays coming from deep space that may be from leftover pieces of exploded stars.

5

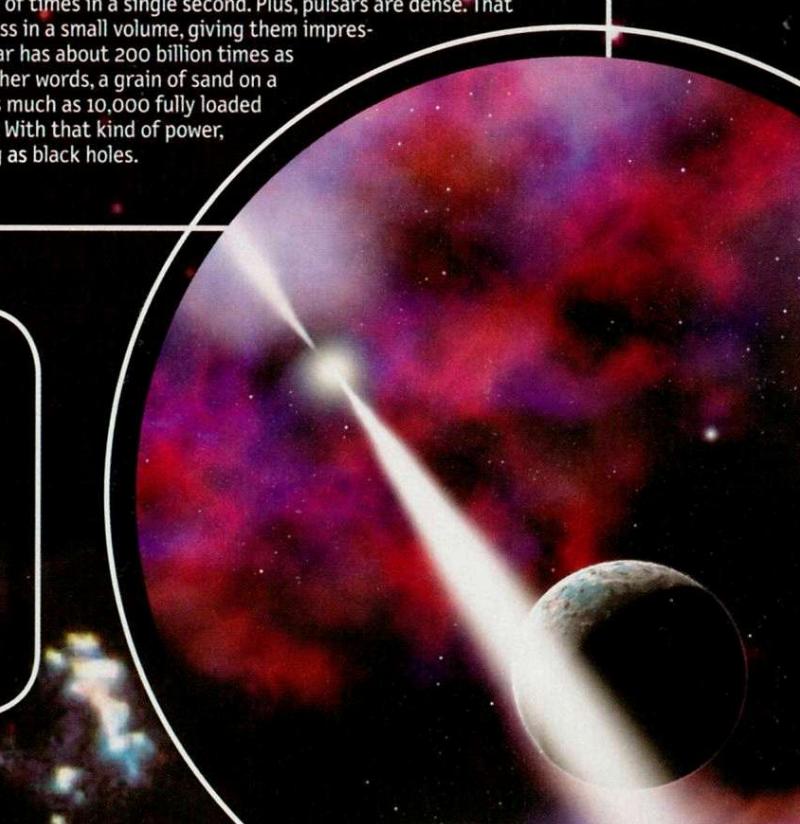

SPINNING PULSARS

A pulsar is a star that turns so fast it will make your head spin. A typical, run-of-the-mill pulsar may rotate hundreds of times in a single second. Plus, pulsars are dense. That means they have a lot of mass in a small volume, giving them impressively strong gravity. A pulsar has about 200 billion times as much gravity as Earth. In other words, a grain of sand on a pulsar would weigh about as much as 10,000 fully loaded semitrailer trucks on Earth. With that kind of power, pulsars are almost as strong as black holes.

6

EXPLODING STARS

The Hubble Space Telescope captured the big picture on these pages: the remnants of a supernova. When a big star runs out of fuel, it doesn't sputter and die like a car out of gas. It explodes. A dying star shines millions of times brighter than ever—and blasts a wave of radiation through space. An exploding star, or supernova, can become so bright that it outshines its entire galaxy. From Earth, astronomers have discovered more than 1,000 supernovae, and hundreds more are identified every year.

7

BRIGHT ENERGY

Quasars, the brightest objects in the universe, shoot out jets of radiation and gas at nearly the speed of light. (The big picture on this page is art showing dust blowing in the winds of a quasar.) Quasars are more powerful than almost anything else in space, and are often 1,000 times brighter than their own galaxies. From Earth, astronomers can see quasars that are billions of light-years away. Quasars exist near black holes, so

8

SPEEDY STARS

Like a home run headed up and out of the stadium, a gang of strange stars is racing out of our galaxy. Scientists measure these hypervelocity stars speeding along at 1.6 million miles an hour—

Funny FILL-IN

The Mad Inventor

BY JILL YAWORSKI

Ask a friend to give you words to fill in the blanks in this story without showing it to him or her. Then read out loud for a laugh.

I was going to be rich! I had just invented the first electric _____ . Using a(n) noun from _____ 's toolbox, I built it out of old noun, plural , tool relative's name metal _____ , and rubber _____ . The first time I turned it on, the machine noun, plural noun, plural worked _____ . I couldn't believe it! " _____ !" I yelled, exclamation verb ending in -ing adverb ending in -ly up and down. I quickly invited a(n) adjective billionaire to check out my invention. I couldn't wait to sell it for large number million dollars and live like name of a celebrity . But when I turned it on, something went terribly adjective . The machine started verb ending in -ing and verb ending in -ing . Suddenly it spewed something slimy and shot slices of food in all directions. The billionaire started screaming at the top of his body part, plural and past-tense verb out of my lab. Good thing I still get my weekly allowance.
